## WHAT CUSTOMERS ARE SAYING

“It was a challenging project to adopt our existing inverter/charger to handle Lithium-Ion technology. We highly recommend Briter Products and their Lithium-Ion battery solution. We are very satisfied with both the batteries and our experience with Briter Products.”  
—Phil & Helen T.

“I love knowing how many hours I have left in my battery before I need to recharge.”  
—Dick H.

# Providing Traveling Freedom

# Worth the Investment

# Superior Mechanical Construction

Whether you camp near shore power access or boondock off-the-grid, Briter lithium-ion batteries provide you the freedom to do so in safety, comfort, and style.

*Experience the freedom that Briter brings!*

## LIGHTWEIGHT

Half the weight of lead-acid batteries

## CONVENIENT

With no need for water, the electrodes won't corrode

## ENERGY

Twice the energy of lead-acid or AGM batteries

## FAST CHARGING

1.5 hrs if the correct charger is used

## ENVIRONMENTALLY-FRIENDLY

Optimized for solar-energy storage

## POWER

Can be linked in parallel for increased amperage

## BATTERY HEALTH

Battery management system is constantly checking on the cells and reading how well the cells are charging, discharging, etc.

From quality construction specifically engineered for RVs, to cutting-edge technology, you won't find another battery like Briter on the market.

*Experience the quality that Briter brings!*

## LCD DISPLAY

Double-check the battery's charge and your DC power system with Briter's unique LCD display

## BLUETOOTH

Can be fitted with Bluetooth, so that energy levels can be monitored from your device

## LONG LIFE

Average lead acids can last 200-500 cycles—our lithium-ion battery can last 2000-5000 cycles

## THE BEST WARRANTY IN THE U.S.

We offer a 5-year warranty with each purchase and an additional extended 5-year warranty for FMCA members. If parts are needed after that point, the batteries can be "reset" with new parts. No need to buy a completely new battery!

## LOWEST COST per energy cycle

We took great care in the mechanical construction of the battery. The quality must be durable enough to prevent the wear and tear that causes circuits to short.

*Experience the safety that Briter brings!*

## MECHANICAL CHARACTERISTICS

- Steel housing for abrasion, crush, and puncture resistance
- Aluminum heat sink in the battery dissipates any heat that does occur
- Properly-gauged wires for efficient energy transfer
- Fastened screws and bolts with epoxy coating so that parts can be replaced. Unlike welding or soldering, they can't be cracked.
- Energy is created in dry cells, so water is not needed and very little heat is created
- Cells are not attached to the walls of the housing. They are offset to create cushioning against vibration.
- Lithium and other chemical reagents have been highly purified to ensure efficient energy transfer and storage

## WHAT CUSTOMERS ARE SAYING

"The workmanship on the installation was superb. After using their batteries over the last eight months, they have proven to be a perfect choice for our dry-camping needs and we are extremely pleased with them. Their after-sale customer service is excellent as well."

—Larry N.

"...Then the Briter team took it to the next step, educating [me] on my batteries and the electrical system of my rig. This company is efficient, honest, informative, and friendly. When I upgrade to lithium batteries, they will be from Briter."

—Sherry
